

STEVAL-IFP006V1

Quad high side smart power solid state relay evaluation board
using the VNI4140K

Data Brief

Features

- Shorted load protections
- Junction over-temperature protection
- Case over-temperature protection for thermal independence of the channels
- Thermal case shut-down non-simultaneous restart for the various channels
- Protection against loss of ground
- Current limitation
- Undervoltage shut-down
- Open drain diagnostic outputs
- 3.3 V CMOS/TTL compatible inputs
- Fast demagnetization of inductive loads
- Conforms to IEC 61131-2

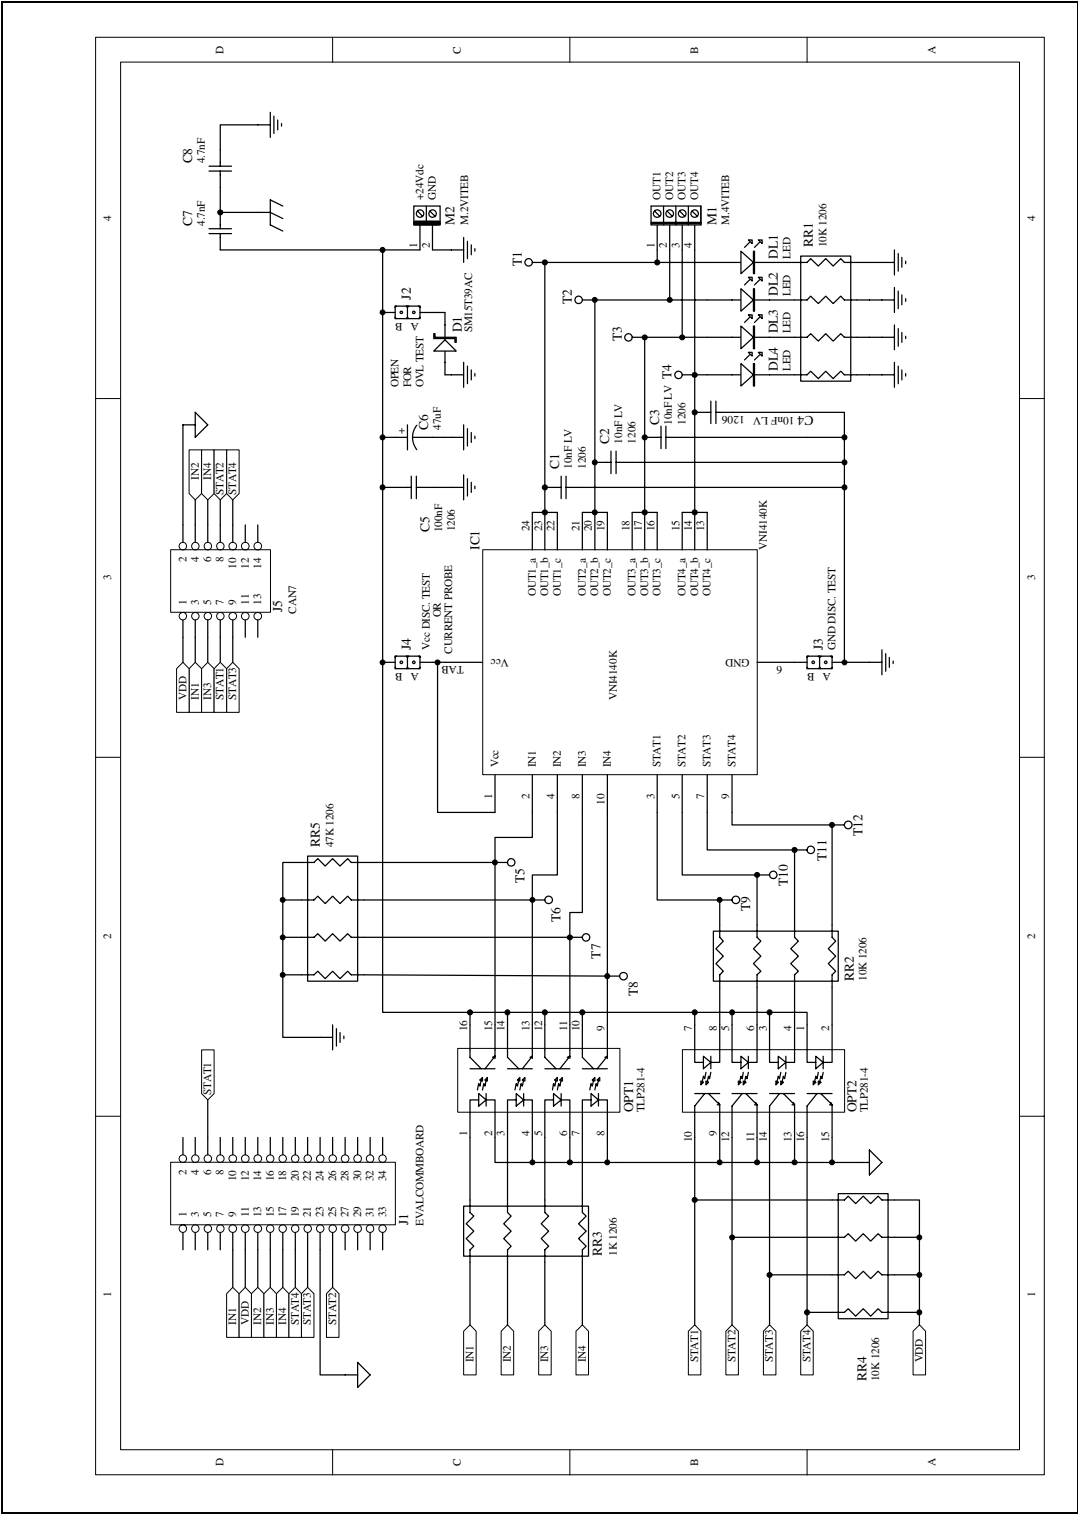

STEVAL-IFP006V1

Description

The purpose of this design is to demonstrate the features of the VNI4140K quad high side smart power solid state relay. The application offers robustness and complies with EMC industrial standards. It implements short-circuit/overload protection and thermal management as well, achieving best-in-class MTBF values. The reference design is suitable for use in programmable logic controllers (PLCs) as well as to drive generic loads which require up to 0.7 A of nominal current (the typical current limitation is 0.7 - 1.7 A). Thanks to the very low $R_{DS(on)}$ (only 80 mΩ typ. @ 25 °C per channel) the device allows very low power consumption during operation and for this reason making it an ideal solution for IP65 / IP67 requirements. The device is compliant with IEC 61131-2 (Programmable Controllers International Standard).

2 Connectors

This evaluation board uses two input header connectors, one screw drives the four-channels output connector and one screw drives the two-channel supply connector.

Both input connectors, J5 and J1, provide the same bidirectional evaluation board signalization guaranteeing the maximum compatibility with existing ST tools, such as the ST7540 FSK powerline transceiver evaluation board (see AN2451) and similar.
